***Election/Restrictions***

The inventions are distinct, each from the other because of the following reasons:

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-26 are, drawn to details of a user interface utilized in a force reflecting haptic interface, classified in class 345, subclass 163.
  - II. Claims 27-35 are, drawn to details of a docking station for a force reflecting haptic interface, classified in class 361, subclass 679.
  - III. Claims 36-47, drawn to details of a direct driving assembly for driving different rotary elements of a force reflecting haptic interface device, classified in class 345, subclass 156.
  - IV. Claims 48-51 are, drawn to details of internal temperature monitoring of a force reflecting haptic interface, classified in class 702, subclass 130.
2. Inventions I-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions I-IV they do not have to be used together since they have different modes of operations drawn to different aspects of the invention.
3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
